Sourcing Plants from Dr. Robert Gegear's Plant List

The following pages show where one can purchase plants for a Pollination Preservation Garden, which is based on Dr. Gegear’s plant list for at-risk pollinators.

This resource was prepared by Matthew Morris of the Metrowest Conservation Alliance (MCA) Native Pollinator Task Force (NPTF). The NPTF aims to conserve native pollination systems by providing the specific habitat requirements and reducing threats for at-risk pollinators in the 36 communities of the MCA.

All nurseries on this document are from a list compiled by Grow Native Massachusetts. These nurseries and garden centers are known to sell a considerable amount of native plants. However, not any native plant will support at-risk native pollinators. The specific plants on Gegear’s list were compiled because they support at-risk species.

https://grownativemass.org/Great-Resources/nurseries-seed

Most plants are Gegear’s list are specific species. Some plants such as oak and lovegrass are not listed at the species level. Any native species of these plants will suffice for a Pollination Preservation Garden.

Some nurseries from the Grow Native webpage were not included for at least one of the following reasons. A nursery did not offer many plants from Gegear’s list. It did not distinguish between straight species and cultivars of native plants. There was not a catalog or inventory of plants listed on its website.

Nurseries may change their catalogs year to year, and many plants are only offered for a select time period.
While searching for plants:

- **Purchase straight species; no cultivars.** Many cultivars do not offer the same amount of resources as straight species. To identify a cultivar, look for extra names. For example, *Monarda didyma* 'Alba' is a cultivar with 'Alba' as its extra name.

- **Purchase plants known to be free of systemic pesticides (including neonicotinoids),** many have been shown to be harmful to many insects. Ask the nurseries if they use neonicotinoids or other systemic pesticide on their plants. Nurseries often purchase plants from other sources. Ask if their sources use such pesticides. Unless you hear a confident, “*No, systemic pesticides were not used on this plant*”, purchase that plant at another nursery. Ask about pesticide uses for each species of plant you are buying.

- **New England ecotypes are preferred.** Even within one species, plants from Massachusetts may be different from plants from Minnesota.

- **Search for a plant’s scientific name.** A plant could have many common names, but it only has one scientific name.

- **Plan ahead!** Many plants are only offered while they are in bloom. It will likely take many trips throughout the year to different nurseries to fully stock your Pollination Preservation Garden.
Agastache scrophulaefolia (Purple Giant Hyssop)

Nectar Source
Herbaceous perennial
Full Sun, Part Sun, Shade
Dry, Medium, & Wet Soil
